

IN THE CLAIMS:

1. **(Currently Amended)** A design method of a product with three-dimensional model, wherein:

a three-dimensional CAM model is prepared, a CAE analysis is performed for said three-dimensional CAM model, and then ~~the~~ drawings of a the product are prepared with ~~the~~ results of said CAE analysis.

2. **(Currently amended)** A design method of a product with three-dimensional model, comprising:

- (1) a first step to prepare a three-dimensional CAM model;
- (2) a second step to perform a CAE analysis for said three-dimensional CAM model;
- (3) a third step to correct said three-dimensional CAM model on the basis of said CAE analysis if ~~the~~ defects exist;
- (4) a fourth step to manufacture a trial product on the basis of said three-dimensional CAM model;
- (5) a fifth step to test said trial product; and
- (6) a sixth step to prepare ~~the~~ drawings on the basis of ~~the~~ results of said test.

3. **(Currently Amended)** A design method of a product with three-dimensional model, comprising:

- (1) a first step to prepare a three-dimensional CAM model;
- (2) a second step to perform a CAE analysis for said three-dimensional CAM model;

- (3) a third step to correct said three-dimensional CAM model on the basis of said CAE analysis if the defects exist;
- (4) a fourth step to manufacture a trial product on the basis of said three-dimensional CAM model;
- (5) a fifth step to test said trial product ;
- (6) a sixth step to correct said three-dimensional CAM model on the basis of the results of said test if the defects exist;
- (7) a seventh step to iterate said fourth through sixth steps until the defects are solved; and
- (8) an eighth step to prepare the drawings on the basis of the three-dimensional CAM model obtained at said seventh step.

Please add claims 4-15 as follows:

-4. (New) The design method according to Claim 1, wherein the CAE analysis is performed in a three-dimensional CAD system.

5. (New) The design method according to Claim 1, wherein the three-dimensional CAM model is divided into a plurality of meshes, the CAE analysis calculation, and a post-calculation display process are performed automatically.

6. (New) The design method according to Claim 1, wherein the CAE analysis is one of a stress analysis, port flow analysis, thermal conduction analysis, and combustion analysis.

7. (New) The design method according to Claim 2, wherein the CAE analysis is performed in a three-dimensional CAD system.

8. (New) The design method according to Claim 2, wherein the three-dimensional CAM model is divided into a plurality of meshes, the CAE analysis calculation, and a post-calculation display process are performed automatically.

9. (New) The design method according to Claim 2, wherein the CAE analysis is one of a stress analysis, port flow analysis, thermal conduction analysis, and combustion analysis.

10. (New) The design method according to Claim 3, wherein the CAE analysis is performed in a three-dimensional CAD system.

11. (New) The design method according to Claim 3, wherein the three-dimensional CAM model is divided into a plurality of meshes, the CAE analysis calculation, and a post-calculation display process are performed automatically.

12. (New) The design method according to Claim 3, wherein the CAE analysis is one of a stress analysis, port flow analysis, thermal conduction analysis, and combustion analysis.

13. (New) A design method of a product with a three-dimensional model, wherein:

a three-dimensional CAM model, which is a detailed three-dimensional model representative of a final shape of the product, is prepared;

a CAE analysis is performed for said three-dimensional CAM model; and
drawings of the product are prepared with results from said CAE analysis.

14. (New) A design method of a product with a three-dimensional model, comprising the following steps of:

- (1) preparing a three-dimensional CAM model, which is a detailed three-dimensional model representative of a final shape of the product;
- (2) performing a CAE analysis for said three-dimensional CAM model;
- (3) correcting said three-dimensional CAM model based on said CAE analysis if a defect exists;
- (4) manufacturing a trial product based on said three-dimensional CAM model;
- (5) testing said trial product; and
- (6) preparing drawings based on results of said testing.

15. **(New)** A design method of a product with a three-dimensional model, comprising the following steps of:

- (1) preparing a three-dimensional CAM model, which is a detailed three-dimensional model representative of a final shape of the product;
- (2) performing a CAE analysis of said three-dimensional CAM model;
- (3) correcting said three-dimensional CAM model based on said CAE analysis if defects exist;
- (4) manufacturing a trial product based on said three-dimensional CAM model;
- (5) testing said trial product;
- (6) correcting said three-dimensional CAM model based on results of said testing if the defects exist;
- (7) repeating steps (4) through (6) until the defects are solved; and

(8) preparing drawings based on said three-dimensional CAM model obtained during step (7).--
